CMAS Science and Social Studies Infrastructure Trials

The CMAS Infrastructure Trial provides a way to test your online assessment environment to verify that your network, proctor caching devices, and student testing devices are configured correctly using Colorado-specific item types. Pearson has created a site readiness form that contains a variety of simulations and technology enhanced items that can be administered through the Colorado Training PearsonAccess next site. Since the items are pulled together from across grade levels and disciplines, this form should not be used by students.

You may scale the trial any way you choose. You can run the form on specific student testing devices to see how the items behave, or set up a more life-like simulation in a classroom or lab to see how the larger test items impact your network and proctor caching device. If your school or district experienced difficulty with the CMAS Science and Social Studies administration in the past we recommend you use this tool to help identify any issues you may encounter.

If you have any questions about this form, contact Collin Bonner, Bonner_C@cde.state.co.us
