

CDE's Approach to Scale-Up Implementation for Significant Disproportionality by 2020

SY2017-18

- CDE examined data from SY2014-15, 2015-16, & 2016-17.
- Risk Ratio Method was used.
- Minimum cell size was 5, N-size was 10.
- Reasonable progress was NOT used.
- Risk ratio thresholds were set based on previous years' practice.
- CCEIS could be used for students without disabilities, only of limited grade range.

SY2018-19

- CDE will examine data from SY2015-16, 2016-17, & 2017-18
- Risk Ratio Method will be used.
- Minimum cell size will be 10, N-size will be 10.
- Reasonable progress will be used.
- SY2018-19 risk ratio thresholds will be applied.
- AUs will receive a preview* of SY2019-20 thresholds.
- CCEIS may be used for students with and without disabilities of age 3 - grade12.

SY2019-20

- CDE will examine data from SY2016-17, 2017-18, & 2018-19.
- Calculation method will be the same as SY2018-19.
- SY2019-20 risk ratio thresholds will be applied.
- AUs will receive a preview of the SY2020-21 thresholds.

SY2020-21

- CDE will examine data from SY2017-18, 2018-19, & 2019-20.
- Calculation method will be the same as SY2018-19.
- SY2020-21 risk ratio thresholds will be applied (thresholds will remain the same until stakeholder groups determine a need to revise them).

Colorado will be compliant with the revised regulation by July 1 2020

Gradually lower the risk ratio thresholds

Already completed during SY2017-18

* "Preview" means that CDE will give administrative units the projected significant disproportionality status of the following year by applying the lowered thresholds of the following year to the current-year's data.
