Several members of Tyrone’s family have problems with heart disease. To avoid developing heart problems, Tyrone should probably do all of the following **except**

- get plenty of cardiovascular exercise.
- restrict intake of fats and sugar.
- **avoid contact with family members.**
- find ways to reduce stress.
EVAPORATION INVESTIGATION

Students in an Earth science class were studying the water cycle. Groups of students decided to design experiments to learn more about the process of evaporation.

One group of students was given four different containers by the teacher. The containers are shown below.

The students poured 100 milliliters of water at 20 °C into each container. The containers were then placed side by side on a table near the window for 24 hours. The next day the students used a graduated cylinder to measure the amount of water left in each container.

2 Write one question the students were probably trying to answer in their investigation.

3 Explain why the students placed the containers side by side instead of placing each container in a different room.
A second group of students decided to see if different liquids evaporate at the same rate. The students decided to test three liquids: fresh water, salt water, and rubbing alcohol. The students poured 50 mL of each liquid into a separate beaker at room temperature, and the beakers were placed next to one another on a shelf.

After two days, the students used a graduated cylinder to measure the amount of liquid remaining in each beaker. The table below shows the results from their experiment.

<table>
<thead>
<tr>
<th>Type of Liquid</th>
<th>Amount of Liquid After Two Days</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fresh Water</td>
<td>35.3 mL</td>
</tr>
<tr>
<td>Salt Water</td>
<td>38.6 mL</td>
</tr>
<tr>
<td>Rubbing Alcohol</td>
<td>22.7 mL</td>
</tr>
</tbody>
</table>

Before the experiment, the students made the hypothesis that salt water would evaporate faster than the other liquids. Do the results of their experiment support their hypothesis? Explain your answer.
The last group of students wanted to investigate the effect of temperature on the evaporation rate of water. To do this, the students obtained twelve beakers from their teacher and poured 100 milliliters of water at room temperature into each beaker. The beakers were then divided into four groups of three. Each group of beakers was placed on a separate hot plate, and the water temperatures were maintained at 30 ºC, 45 ºC, 60 ºC, and 75 ºC respectively. After four hours, the students measured the amount of water remaining in each beaker and calculated the amount of water that had evaporated.

5 Write a possible hypothesis for the students’ experiment.

6 Explain why the students used three beakers of water at each temperature rather than just one beaker.
The table below shows the results of this experiment.

<table>
<thead>
<tr>
<th>Temperature (°C)</th>
<th>Amount of Water Evaporated (mL)</th>
<th>Average Amount of Water Evaporated (mL)</th>
</tr>
</thead>
<tbody>
<tr>
<td>30</td>
<td>1.8</td>
<td>2.1</td>
</tr>
<tr>
<td>45</td>
<td>6.3</td>
<td>6.1</td>
</tr>
<tr>
<td>60</td>
<td>11.5</td>
<td>10.5</td>
</tr>
<tr>
<td>75</td>
<td>21.1</td>
<td>19.7</td>
</tr>
</tbody>
</table>

Using the grid below, construct a line graph showing the relationship between the temperatures of the water and the average amount of water that evaporated. Be sure to title your graph, label each axis, and indicate the appropriate units for each axis.
Using the data table or your graph, predict the amount of water that would evaporate after 4 hours if 100 mL of water were kept at 90 °C. Explain your answer.
CSAP Grade 8 Science Scoring Guide

Item 2

Rubric

Key Element:

*one of the following:*

- Does container size have any effect on evaporation rate?
- Does container shape have any effect on evaporation rate?
- In what type/kind of container will water evaporate fastest?
- Any question that relates containers’ shape or size to evaporation rate.

Score Points:

1 point one key element
0 points other

Standard: 1.3 Asking questions and stating hypotheses that lead to different types of scientific investigations.

Item 3

Rubric

Key Element:

*one of the following:*

- The containers are placed next to one another to reduce error.
- The containers are placed next to one another to control for an extraneous variable.
- The containers are placed next to one another to make the results more comparable/reliable.
- The containers are placed next to one another so that experimental conditions are same for all the containers.

Score Points:

1 point one key element
0 points other

Standard: 1.1 Identifying and evaluating alternative explanations and procedures.
CSAP Grade 8 Science Scoring Guide

Item 4

Rubric

Key Element:

*one of the following:*

• No, the table shows that less of the fresh water and rubbing alcohol were left.
• No, more liquid evaporated from the beakers containing fresh water and rubbing alcohol.
• No, the amount of fresh water and rubbing alcohol left in the beakers was less than the salt water.
• No, 11.4 mL of salt water evaporated which is less than the evaporated fresh water (14.7 mL) and rubbing alcohol (27.3 mL).
• Any explanation that data does not support the hypothesis since more salt water was left or less salt water evaporated than the other two liquids.

NOTE: Give credit if the answer is correct but the water and rubbing alcohol are transposed.

Score Points:

1 point  one key element
0 points  other

Standard: 1.6  Interpreting and evaluating data in order to formulate conclusions.

Item 5

Rubric

Key Elements:

*one of the following:*

• Temperature has no effect on the evaporation rate.
• Evaporation will be maximum at 75 °C.
• Evaporation will be maximum at 30 °C.
• Evaporation will be same at different temperatures.
• Any statement (not a question) relating temperature and evaporation rate.

Score Points:

1 point  one key element
0 points  other

Standard: 1.3  Asking questions and stating hypotheses that lead to different types of scientific investigations.
Item 6

Rubric

Key Elements:

*one of the following:*

- A bigger sample size leads to reliable, more accurate, data.
- Students used three beakers of water to reduce errors.
- Students used three beakers of water to determine the average result for the experimental data.
- any answer indicating larger sample sizes yield more reliable results

Score Points:

<table>

| Title                              | • Temperature vs. Amount of Water Evaporated  
• Evaporation of Water at Different Temperatures  
• Degrees vs. mL Evaporated        | • Graph  
• Data Table  
• Average evaporation  
• Averages  
• Evaporation Investigation |
| Length of Line                     | Line may extend beyond points in either direction.                                  | If the line begins at 0 and connects with the four points, it is incorrect.            |
| Space Utilization                  | Scaled from 0–100 on x-axis (each line 10) and 0–25 on the y-axis (each line 2.5mL).  
Other scales that utilize a majority of graph space are acceptable. | Scaled less than 0–100 on the x-axis with each line being more than 10 or scaled less than 0–25  
on the y-axis with each line being more than 2.5 mL. |
| Correct information on both x and y-axis | Temperature on the x-axis, Average Amount of Water Evaporated on the y-axis      | Words such as trials, tests, or times are not acceptable.                           |
| x-axis labeled with units          | Degrees C (mL if x-axis label is average amount of water evaporated)               | Incorrect or no label.                                                              |
| y-axis labeled with units          | mL (Degrees C if the y-axis is Temperature)                                       | Incorrect or no label.                                                              |
| Data Plotted                       | Only the four average amounts of water evaporated may be plotted.                 | Any other information plotted on either axis.                                       |

Score Points:

2 points six or more key elements
1 point four or five key elements
0 points three or less key elements/irrelevant, unclear, or inaccurate information

Graph accuracy

Score Points:

2 points four data points plotted correctly with a line connecting the points
1 point three data points plotted correctly with a line connecting the points, or all data points plotted correctly but not connected with a line
0 points three data points plotted correctly but not connected with a line, or two or fewer data points plotted correctly with a line connecting the points, or irrelevant, unclear, or inaccurate information

Standard: 1.7 Communicating results of their investigation in appropriate ways.
CSAP Grade 8 Science Scoring Guide

Item 8

Key Elements:

any amount between 27 and 50 mL.

one of the following:

• As temperature increased from 60 to 75 °C, evaporation rate doubled.
• Any explanation indicating extrapolation of the line/curve.
• Any explanation indicating that evaporation rate is increasing with increasing temperature.

Score Points:

2 points  two key elements
1 point   one key element
0 points  other

Standard: 1.6  Interpreting and evaluating data in order to formulate conclusions.
**Directions**

The table below shows how far away people can feel tremors from earthquakes of different magnitudes. The table also shows about how many times each year earthquakes of different magnitudes occur. Use the table to do Numbers 9 and 10.

<table>
<thead>
<tr>
<th>Magnitude</th>
<th>Distance From Earthquake That Tremors Can Be Felt</th>
<th>Number Occurring Each Year</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>24 kilometers</td>
<td>49,000</td>
</tr>
<tr>
<td>4</td>
<td>48 kilometers</td>
<td>6,200</td>
</tr>
<tr>
<td>5</td>
<td>112 kilometers</td>
<td>800</td>
</tr>
<tr>
<td>6</td>
<td>200 kilometers</td>
<td>120</td>
</tr>
<tr>
<td>7</td>
<td>400 kilometers</td>
<td>18</td>
</tr>
<tr>
<td>8</td>
<td>720 kilometers</td>
<td>1</td>
</tr>
</tbody>
</table>

9. According to the table, as the magnitude of earthquakes increases, the distance that tremors will be felt
   - increases.
   - decreases.
   - increases and then decreases.
   - remains the same.

10. If an earthquake with a magnitude of 2 occurred, how far away from the earthquake would the tremors most likely be felt?
    - more than 112 kilometers
    - between 48 and 112 kilometers
    - between 24 and 48 kilometers
    - less than 24 kilometers
Look at the picture of a roller coaster below.

The car on the roller coaster is released from the position shown and allowed to roll freely.

Name two of the forces that affect the motion of the car while it moves on the roller coaster.

__________________________________________________________________________________

__________________________________________________________________________________

Describe how the potential and kinetic energy of the car change as the car rolls downhill.

__________________________________________________________________________________

__________________________________________________________________________________

__________________________________________________________________________________

Explain why the car cannot reach point X on the third hill, as shown in the picture.

__________________________________________________________________________________

__________________________________________________________________________________

__________________________________________________________________________________
Item 11

Rubric

Key Elements:

any two of the following:
- gravity
- air resistance/air/wind
- friction

The kinetic energy increases and the potential energy decreases.

one of the following:
- The car loses energy due to friction/air resistance.
- The car started from a point that is lower than X, hence it does not have the energy to reach X.
- Any answer indicating that energy is lost or that the energy the car has at the starting point is less than the energy needed to reach X.

Score Points:

3 points three key elements
2 points two key elements
1 point one key element
0 points other

Standard: 2.3.5 Describing, measuring, and calculating quantities that characterize moving objects and their interactions within a system.
12 Explain two main causes of seasons on Earth. Look at the diagram below to help with your written explanation.

Explanation: ________________________________

______________________________

______________________________

______________________________

______________________________
Item 12

Key Elements:

Earth revolves/goes around the sun.

NOTE: No credit if the student refers to changing distance between the sun and Earth.

Earth’s axis of rotation is tilted / directness of the sun’s rays changes.

Score Points:

<table>
<thead>

</table>

Standard: 4.1.4 Explaining the distribution and causes of natural events.
Choose one of the technologies listed below and describe one way scientists use it to study Earth.

- satellite
- seismograph
CSAP Grade 8 Science Scoring Guide

Item 14

Key Elements:

---

Satellite:

one of the following:

- map the earth
- study weather
- take photographs of Earth
- any other way scientists use satellites

Seismograph:

one of the following:

- study earthquakes
- study the composition of the earth
- any other way scientists use seismographs

NOTE: Give credit if the student does not specifically list the technology but it can be inferred from the description.

---

Score Points:

1 point  one key element
0 points  other

Standard: 5.4 Describing how people use science and technology in their professions.
15 Explain why it is practical to use solar energy as a resource in Colorado.

Give one advantage of using solar energy instead of using natural gas.
CSAP Grade 8 Science Scoring Guide

Item 15

Rubric

Key Elements:

any response indicating the abundance of sunlight in Colorado

one of the following:
• Solar energy is renewable/natural gas is nonrenewable.
• Using solar energy does not give off any harmful substances/burning natural gas gives off harmful substances into the air.
• Solar energy is cheaper.

Score Points:

2 points  two key elements
1 point  one key element
0 points  other

Standard: 5.3  Describing how the use of technology can help solve an individual or community problem.
