Inhaled Anti-Inflammatories

Inhaled anti-inflammatories reduce and prevent airway inflammation (swelling). Used daily, anti-inflammatories treat the underlying part of asthma that you may not feel or see.

Combination Medications

Combination medications contain both long-acting bronchodilator and inhaled corticosteroid components.

Asthma Inhalers

Aerosolizers contain both long-acting bronchodilator and inhaled corticosteroid components.

Important:
Foradil and Serevent should NOT be used to treat acute symptoms of asthma.
