This unit was authored by a team of Colorado educators. The template provided one example of unit design that enabled teacher-authors to organize possible learning experiences, resources, differentiation, and assessments. The unit is intended to support teachers, schools, and districts as they make their own local decisions around the best instructional plans and practices for all students.

### Colorado 21st Century Skills

- **Critical Thinking and Reasoning:** Thinking Deeply, Thinking Differently
- **Information Literacy:** Untangling the Web
- **Collaboration:** Working Together, Learning Together
- **Self-Direction:** Own Your Learning
- **Invention:** Creating Solutions

### Intragrated Curriculum Design:
This intradisciplinary approach matches basic elements in each of the science strands – physical, life, earth systems sciences - forming overlaps in instruction of certain topics and concepts in an authentic integrated model.

# Renewable and Nonrenewable Resources

## Focusing Lens(es)
- Origins

## Standards and Grade Level Expectations Addressed in this Unit
- SC09-GR.5-S.3-GLE.1
- RWC10-GR.5-S.1-GLE.1

## Inquiry Questions (Engaging-Debatable):
- What are the consequences to the earth of utilizing renewable and nonrenewable resources? (SC09-GR.5-S3-GLE.1)

## Unit Strands
- Earth Science

## Concepts
- renewable resources, nonrenewable resources, energy, natural resources

### Generalizations

**My students will Understand that...**

<table>
<thead>
<tr>
<th>Factual</th>
<th>Guiding Questions</th>
<th>Conceptual</th>
</tr>
</thead>
<tbody>
<tr>
<td>Natural resources, generated by the sun or the Earth and used by humans, provide energy for daily activities. (SC09-GR.5-S3-GLE.1-E0.a)</td>
<td>What natural resources provide energy? (SC09-GR.5-S3-GLE.1; IQ.1,2,3)</td>
<td>How do natural resources provide energy? (SC09-GR.5-S3-GLE.1-E0.b)</td>
</tr>
<tr>
<td>Many natural resources provide sources of energy which humans, plants, and animals can harness for consumption. (SC09-GR.5-S.3-GLE.1)</td>
<td>What natural resources provide energy? (SC09-GR.5-S.3-GLE.1-E0.b;IQ.1,2,3;N.1,2)</td>
<td>How do natural resources provide energy? How can the sun be used as an energy source? (SC09-GR.5-S.3-GLE.1; IQ.1)</td>
</tr>
<tr>
<td>The physical environment provides opportunities for and places constraints on human activities (SC09-GR.5-S3-GLE.1-E0.b ; N.1)</td>
<td>How does the environment affect human activity? How does human activity affect the environment?</td>
<td>What must be done to keep individuals and businesses from negatively affecting the environment?</td>
</tr>
</tbody>
</table>

5th Grade, Science
Humans, more than any other animal, have the power to make decisions that contribute to the protection or endangerment of Earth’s environment (RWC10-GR.5-S1-GLE.1-E0.a; IQ.3) and (SC09-GR.5-S3-GLE.1; N.1) What are some human behaviors which effect the environment? (SC09-GR.5-S3-GLE.1-E0.b;RA.1,2,3; N.1) Which human behaviors can and cannot be continued if we wish to maintain a healthy environment? (SC09-GR.5-S3-GLE.1-E0.b;RA.1,2,3; N.1)

</table>

**Critical Language:** includes the Academic and Technical vocabulary, semantics, and discourse which are particular to and necessary for accessing a given discipline. EXAMPLE: A student in Language Arts can demonstrate the ability to apply and comprehend critical language through the following statement: “Mark Twain exposes the hypocrisy of slavery through the use of satire.”

A student in ______________ can demonstrate the ability to apply and comprehend critical language through the following statement(s):

**Academic Vocabulary:** energy, energy sources, natural resources

**Technical Vocabulary:** resource, renewable, nonrenewable, extraction

Energy on earth is provided from many sources. Some energy sources are limited.
**Unit Description:**
This unit focuses on how humans, plants, and animals use renewable and non-renewable energy resources, and how the use of these resources impacts the environment both positively and negatively. The physical environment limits available resources, which dictate human use, decision-making, and activity. Beginning with the natural resources (renewable and nonrenewable), across the unit students investigate energy, infographics, resource availability and consumption, and the interconnectedness of humans and energy production and use. The unit culminates in a performance assessment that asks students to take the role of a city utility engineer and come up with a solution for coal depletion and present to the local city council.

**Considerations:**
Teachers may need to consider timing of this unit, based upon the amount of time dedicated to science each week.

The authors of this unit focused the assessment on coal because that was a local concern. However, one could use other resources (e.g., natural gas, etc.) within the assessment.

**Unit Generalizations**

<table>

</tr>
<tr>
<td></td>
<td>Humans, more than any other animal, have the power to make decisions that contribute to the protection or endangerment of Earth’s environment</td>
</tr>
</tbody>
</table>

**Performance Assessment:** The capstone/summative assessment for this unit.

**Claims:**
(Key generalization(s) to be mastered and demonstrated through the capstone assessment.)

- Natural resources, generated by the sun or the Earth and used by humans, provide energy for daily activities.

**Stimulus Material:**
(Engaging scenario that includes role, audience, goal/outcome and explicitly connects the key generalization)

WARNING! Coal has been depleted as an energy resource and will not be available to your cities daily activities in six months. It is up to you, as a city utility engineer to come up with a solution to present to the local city council. In order to accomplish this you must:
- Identify the Impacts of coal depletion on your city;
- Identify all possibilities of replacement energy resources;
- Justify your choice of a replacement energy resource (you must include discussion about the sustainability of your choice, the renewable or non-renewable nature of your choice, and the geographical availability of your choice);
- Justify why you did not choose the other resource options.

**Product/Evidence:**
(Expected product from students)

The student is a city utility engineer tasked to research the depletion of coal and a possible viable resource replacement option that they will then present to the city council (e.g. oral, Power Point, Prezi, debate, etc.). They must identify the potential impacts once it is depleted and the logical options for energy replacement. They must identify the different possible sources of energy production (hydroelectric, wind, geothermal, solar, natural gas, petroleum, nuclear, etc.). They must choose a replacement resource, justify their choice, and justify why they did not choose at least three other sources of energy. They must include sustainability of their choice, renewable or non-renewable energy, and geographical availability.
Colorado Teacher-Authoried Sample Instructional Unit

Differentiation:
(Multiple modes for student expression)

- The teacher may allow students to use multiple presentation options (e.g. oral, Power Point, Prezi, debate, etc.).
- The teacher may allow students to list a reduced number of replacement energy options and impacts.
- The teacher may allow students to justify their choice and at least one replacement choice.
- The teacher may allow students to use picture books to identify the different energy resources.
- The teacher may allow students to use a word bank with graphics.
- The teacher may allow students to use an outline/graphic organizer to assist with the planning and organization of their presentation.
- The teacher may allow students to have oral presentation of assessment.
- The teacher may allow students to use assistive technology.
- The teacher may allow students to have sections of their presentation graded in intervals.
- To extend this work, students must choose a different location around the world that also relies on a non-renewable resource. Their recommendation must be written through persuasive writing.

Skills: Building and reviewing academic and technical language
Engage in discussions
Communicating cause and effect
Engage in peer review

Assessment: The student will be assessed within learning experiences

Student Resources:
http://www.brainpop.com/educators/community/bp-jr-topic/scientific-method/ (Near middle of teacher resource page; includes lesson plans on scientific method)
http://undsci.berkeley.edu/article/howscienceworks_16 ("Scrutinizing Science: Peer Review" gives information about the role of peer review process in science)
http://undsci.berkeley.edu/article/whatisscience_03 (Explains what is science and includes a scientific checklist)
## Prior Knowledge and Experiences

Students should have knowledge of recycling, sources of energy for humans, plants and animals and the way they harness and use energy in their everyday lives, ecosystems, endangered animals, and where energy comes from. They must also have mapping skills, be able to compare and contrast, and be able to present information to a group.

Vertical Articulation: Students have last seen concepts related to this unit in 1st grade and Preschool.

## Learning Experiences # 1 – 3

### Instructional Timeframe: Weeks 1-2

### Learning Experience # 1

The teacher may brainstorm natural resources (e.g., solar, wind, coal, natural gas) so that students can begin defining and categorizing renewable and nonrenewable resources used by humans.

| Generalization Connection(s): | Natural resources, generated by the sun or the Earth and used by humans, provide energy for daily activities |

</tbody>
</table>

### Critical Content:
- The understanding of geographical connections to human use of resources can limit/enhance resource use specific to location

### Key Skills:
- Read maps
- Interpret maps
- Participate in class/group discussion

### Critical Language:
- Energy, resource, non-renewable, renewable, discuss, interpret, geographic location, interpret, read, identify, discuss

### Learning Experience # 3

The teacher can utilize info-graphics to illustrate the percentage of resource consumed by a specific geographic location (local or state) so that students can analyze and interpret data regarding resource use.

### Generalization Connection(s):
- Natural resources, generated by the sun or the Earth and used by humans, provide energy for daily activities

### Teacher Resources:
- [www.eia.gov](http://www.eia.gov) (Energy website)
- Use local utility educational outreach website
- [www.brainpop.com/educators/community/bp-topic/wind-energy](http://www.brainpop.com/educators/community/bp-topic/wind-energy) (Lesson ideas)
- [www.brainpop.com/educators/community/bp-topic/fossil-fuels](http://www.brainpop.com/educators/community/bp-topic/fossil-fuels) (Lesson ideas)
### Student Resources:
- [http://www.eia.gov/kids/](http://www.eia.gov/kids/) (Energy website)

### Assessment:
Students will create a graph that represents human use of a specific natural resource (e.g., coal, natural gas, wind power, solar energy, etc.) specific to city, county, or Colorado.

[http://nces.ed.gov/nceskids/createagraph/default.aspx](http://nces.ed.gov/nceskids/createagraph/default.aspx) (Online way to create different types of graphs)

### Differentiation:
(Multiple means for students to access content and multiple modes for student to express understanding.)

<table>
<thead>
<tr>
<th>Access (Resources and/or Process)</th>
<th>Expression (Products and/or Performance)</th>
</tr>
</thead>
<tbody>
<tr>
<td>The teacher may allow for student choice or graph type</td>
<td>The student may graph human use of resources using a given template <a href="http://nces.ed.gov/NCESKIDS/createagraph/default.aspx">http://nces.ed.gov/NCESKIDS/createagraph/default.aspx</a> (Basic graph template)</td>
</tr>
</tbody>
</table>

### Extensions for depth and complexity:

<table>
<thead>
<tr>
<th>Access (Resources and/or Process)</th>
<th>Expression (Products and/or Performance)</th>
</tr>
</thead>
<tbody>
<tr>
<td>The teacher may allow students to explore the “Renew a Bean” activity: <a href="http://www.womeninmining.org/activities/Renew_a_Bean.pdf">http://www.womeninmining.org/activities/Renew_a_Bean.pdf</a> (Activity on women and mining)</td>
<td>The student may create a data chart based on their explorations</td>
</tr>
</tbody>
</table>

### Critical Content:
- The understanding of geographical connections to human use of resources can limit/enhance resources used specific to location.

### Key Skills:
- Read maps
- Interpret maps
- Analyze data

### Critical Language:
- Credible sources, resource, renewable, non-renewable, energy, geographic location, interpret, analyze

---

### Learning Experiences # 4 – 6
**Instructional Timeframe: Weeks 3-4**

#### Learning Experience # 4

The teacher may use artifacts (and/or a guest speaker) to present information about energy use and daily life so that students can begin evaluating how energy is used in their own lives.

#### Generalization Connection(s):
- Natural resources, generated by the sun or the Earth and used by humans, provide energy for daily activities
- Many natural resources provide sources of energy which humans, plants, and animals can harness for consumption
# Teacher Resources:
Utilize local utility educational outreach program for guest speakers:
- [http://www.xcelenergy.com/](http://www.xcelenergy.com/) (Xcel energy website)
- [http://www.neok12.com/Energy-Sources.htm](http://www.neok12.com/Energy-Sources.htm) (Various video clips on Energy and Natural Resources (games & quizzes available for a fee))

# Student Resources:
- [http://www.sciencenotebooks.org](http://www.sciencenotebooks.org) (Lab/science notebooks)

# Assessment:
Students will track and record how they use energy in their daily life for a week in the science notebooks.

# Differentiation:
(Multiple means for students to access content and multiple modes for student to express understanding.)
- The teacher may use extended time
- The teacher may use vocabulary cards with graphics
- The teacher may use repetition of instruction
- The teacher may use peer assistance/grouping
- The teacher may use alternate grading

# Extensions for depth and complexity:

<table>
<thead>
<tr>
<th>Access (Resources and/or Process)</th>
<th>Expression (Products and/or Performance)</th>
</tr>
</thead>
<tbody>
<tr>
<td>The teacher may allow students to apply their knowledge of energy to their own lives day to day</td>
<td>The student may create a diagram of their home or school identifying energy and terms associated with energy</td>
</tr>
</tbody>
</table>

# Critical Content:
- Basic understanding of energy
- Uses of energy
- Harnessing energy

# Key Skills:
- Explain energy process
- Brainstorm concepts regarding energy consumption
- Identify possible energy replacements

# Critical Language:
Energy, generate, consumption, opportunities, renewable, nonrenewable, identify, brainstorm, explain, identify, brainstorm
Learning Experience # 5

The teacher may use examples of human, plant and animal energy consumption so that students can begin seeing the ways in which all organisms depend on/deplete environmental resources.

Generalization Connection(s):
Natural resources, generated by the sun or the Earth and used by humans, provide energy for daily activities. Humans, more than any other animal, have the power to make decisions that contribute to the protection or endangerment of Earth’s environment. Many natural resources provide sources of energy which humans, plants, and animals can harness for consumption.

Teacher Resources:
- [http://eia.gov/consumption/residential](http://eia.gov/consumption/residential) (Data on energy consumption)
- [http://www.energystar.gov/index.cfm?c=kids.kids_index](http://www.energystar.gov/index.cfm?c=kids.kids_index) (Teacher and student information website)
- [http://www.xof1.com/energyConsumption.php](http://www.xof1.com/energyConsumption.php) (Multi-source energy website with graphs)

Student Resources:
- [http://www.energystar.gov/index.cfm?c=kids.kids_index](http://www.energystar.gov/index.cfm?c=kids.kids_index) (Teacher and student information website)
- [http://www.xof1.com/energyConsumption.php](http://www.xof1.com/energyConsumption.php) (Multi-source energy website with graphs)

Assessment:
Students will use a graphic organizer (multi flow) to document cause and effect of energy consumption and depletion.

Differentiation:
(Multiple means for students to access content and multiple modes for student to express understanding.)

Access (Resources and/or Process)
- The teacher may use vocabulary cards with graphics
- The teacher may use peer assistance/grouping

Expression (Products and/or Performance)
- The student may present the graphic organizer verbally to the teacher

Extensions for depth and complexity:

Access (Resources and/or Process)
- The teacher may allow students to research energy consumption over time

Expression (Products and/or Performance)
- The student may create a longitudinal graph by looking at the information over time

Critical Content:
- Basic understanding of energy
- Uses of energy
- Harnessing energy

Key Skills:
- Explain energy process
- Brainstorm concepts regarding energy consumption
- Identify possible energy replacements

Critical Language:
Energy, generate, consumption, opportunities, renewable, nonrenewable, identify, brainstorm, explain
## Learning Experience # 6

The teacher may bring in sources related to energy consumption (e.g., school energy bill) so that students can make basic inferences or logical predictions about energy use.

### Generalization Connection(s):

- Natural resources, generated by the sun or the Earth and used by humans, provide energy for daily activities.
- Humans, more than any other animal, have the power to make decisions that contribute to the protection or endangerment of Earth’s environment.
- Many natural resources provide sources of energy which humans, plants, and animals can harness for consumption.

### Teacher Resources:

- [http://historyexplorer.si.edu/PrimarySources.pdf](http://historyexplorer.si.edu/PrimarySources.pdf) (Teacher’s guide to engaging students with primary sources)

### Student Resources:

- [http://library.albany.edu/usered/dr/prisci.html](http://library.albany.edu/usered/dr/prisci.html) (These reference charts define primary and secondary sources in science and list examples of each type of resource.)
- [http://content.easybib.com/students/](http://content.easybib.com/students/) (Helps students plan, research, organize, write and cite sources)

### Assessment:

- The students will record their inferences and predictions of the school’s energy use for this coming winter in their science notebooks.
- [http://www.sciencenotebooks.org](http://www.sciencenotebooks.org) (Lab/science notebooks)

### Differentiation:

(Multiple means for students to access content and multiple modes for student to express understanding.)

### Extensions for depth and complexity:

- **Access (Resources and/or Process)**
  - The teacher may allow strategic grouping to support all students.
- **Expression (Products and/or Performance)**
  - The student may present their thinking one-on-one with the teacher.

- **Access (Resources and/or Process)**
  - The teacher may allow students to investigate other forms of energy consumption at their school.
- **Expression (Products and/or Performance)**
  - The student may present their findings to the class.

### Critical Content:

- Energy available in each environment, why people live where they live

### Key Skills:

- Map reading, synthesizing information from multiple sources

### Critical Language:

- Physical map, political map, resource map, synthesize, solar power, wind power, hydro power, geothermal, petroleum, coal, natural gas, environment, ecosystem, renewable, nonrenewable, synthesize, map, credibility
### Learning Experience # 7

The teacher may use contemporary natural maps of Colorado (physical and resource) to enable students to discuss the connection between availability of resources and the location of human settlements.

| Generalization Connection(s): | Natural resources, generated by the sun or the Earth and used by humans, provide energy for daily activities. Humans, more than any other animal, have the power to make decisions that contribute to the protection or endangerment of Earth’s environment. Many natural resources provide services which humans, plants, and animals can harness for consumption. |
[http://education.nationalgeographic.com/education/mapping/interactive-map/?ar_a=1](http://education.nationalgeographic.com/education/mapping/interactive-map/?ar_a=1) (National Geographic Interactive Maps) |
[http://education.nationalgeographic.com/education/mapping/interactive-map/?ar_a=1](http://education.nationalgeographic.com/education/mapping/interactive-map/?ar_a=1) (National Geographic Interactive Maps) |
| Assessment: | Student will produce a ticket out of class identifying how the physical environment provides/limits natural resources.  
| Differentiation: | Access (Resources and/or Process)  
N/A  
Expression (Products and/or Performance)  
The student may verbally identify how the physical environment provides/limits natural resources |
Extensions for depth and complexity: | Access (Resources and/or Process) | Expression (Products and/or Performance) |
---|---|---|
The teacher may allow students to specifically look at their local area and identify specific limitations of natural resources | The student may create a graphic demonstrating how the local environment limits natural resources |

Critical Content:  
- Energy available in each environment, why people live where they live  

Key Skills:  
- Map reading, synthesizing information from multiple sources, being able to communicate evidence-based scientific explanations  

Critical Language:  
- Physical map, political map, resource map, synthesize, solar power, wind power, hydro power, geothermal, petroleum, coal, natural gas, environment, ecosystem, renewable, nonrenewable, synthesis, create, identify  

Learning Experience # 8  

The teacher may provide primary or secondary sources related to human settlements so that students can deepen their understanding of the ways in which the physical environment dictates human settlements.  

Generalization Connection(s):  
- Natural resources, generated by the sun or the Earth and used by humans, provide energy for daily activities  
- Humans, more than any other animal, have the power to make decisions that contribute to the protection or endangerment of Earth’s environment  
- Many natural resources provide sources of energy which humans, plants, and animals can harness for consumption  

Teacher Resources:  

Student Resources:  

Assessment:  
- Students will map the locations of fossil fuels (extraction and mining locations) in Colorado, which could emphasize or delineate renewable and non-renewable forms or energy, and explain how these could dictate human settlements.  

Differentiation:  
(Multiple means for students to access content and multiple modes for student to express understanding.)  

Access (Resources and/or Process)  
- The teacher may provide less complex scenarios  

Expression (Products and/or Performance)  
- The student may explain their understanding verbally  

http://nces.ed.gov/nceskids/createagraph/default.aspx (Online way to create different types of graphs)
Extensions for depth and complexity:

**Access (Resources and/or Process)**

The teacher may allow students to research human settlements and movements in history to support the idea of human settlement is dictated by physical environments.

**Expression (Products and/or Performance)**

The student may present their findings visually to the class with justifications for their ideas.

Critical Content:

- Energy available in each environment, why people live where they live

Key Skills:

- Map reading, synthesizing information from multiple sources, being able to communicate evidence-based scientific explanations

Critical Language:

Physical map, political map, resource map, synthesize, solar power, wind power, hydro power, geothermal, petroleum, coal, natural gas, environment, ecosystem, renewable, nonrenewable, scenario, synthesis

---

**Learning Experiences # 9-11**

**Instructional Timeframe: Weeks 7-8**

**Learning Experience # 9**

The teacher may use real-life scenarios of the depletion of natural resources in Colorado, so that students can develop and analyze the human impact on energy use and depletion.

**Generalization Connection(s):**

- Natural resources, generated by the sun or the Earth and used by humans, provide energy for daily activities
- The physical environment provides opportunities for and places constraints on human activities
- Humans, more than any other animal, have the power to make decisions that contribute to the protection or endangerment of Earth’s environment

**Teacher Resources:**

- [http://education.nationalgeographic.com/education/activity/non-renewable-energy-resources/?ar_a=1](http://education.nationalgeographic.com/education/activity/non-renewable-energy-resources/?ar_a=1) (Students participate in a simulation of energy through the roles of consumer, energy companies, and fuel companies)
- [http://energyxroads.com/index.html](http://energyxroads.com/index.html) (Short video clips from a larger documentary called “Energy Crossroads”)

**Assessment:**

Students will produce an exit ticket that lists at least two environmental concerns centered on resources and energy.

### Colorado Teacher-Authored Sample Instructional Unit

#### Extensions for depth and complexity:
**Access (Resources and/or Process)**
The teacher may allow students to investigate how they personally could change their activities to decrease environmental impact related to energy usage.

**Expression (Products and/or Performance)**
The student may write a proposal for altering their “environmental footprint”.

#### Critical Content:
- Current Environment concerns (depletion of rainforests, glaciers melting, agriculture, deforestation, global warming, etc.)
- What are we doing to contribute to or deplete earth’s resources? (Human Impact and Choice)

#### Key Skills:
- Apply knowledge of unit to explain how natural resources impact human activities
- Discussion of credible sources

#### Critical Language:
Renewable, non-renewable resources, apply, resources, energy, credible sources, depletion, global warming, deforestation, glaciers, agriculture, solutions, discuss, investigate

---

#### Learning Experience #11

The teacher may engage students in a debate (e.g., structured academic controversy) about one current natural resource issue so that students can present arguments supported by credible scientific evidence.

#### Generalization Connection(s):
Natural resources, generated by the sun or the Earth and used by humans, provide energy for daily activities
The physical environment provides opportunities for and places constraints on human activities
Humans, more than any other animal, have the power to make decisions that contribute to the protection or endangerment of Earth’s environment

#### Teacher Resources:
- [http://pachyderm.cdl.edu/elixr-stories/integrative-learning-communication/](http://pachyderm.cdl.edu/elixr-stories/integrative-learning-communication/) (Structured academic controversy site describing a debate assignment on climate change)
- [http://www.colorado.edu/engineering/features-cue-home/fracking-fracas](http://www.colorado.edu/engineering/features-cue-home/fracking-fracas) (Article on fracking)

#### Student Resources:
- [http://www.colorado.edu/engineering/features-cue-home/fracking-fracas](http://www.colorado.edu/engineering/features-cue-home/fracking-fracas) (Article on fracking)

#### Assessment:
Students will create an exit ticket documenting the consensus reached by their group during the debate/structured academic controversy.

[http://exitticket.org/?pclid=CMKZt6Xsi0CFQ5qfgod_YEAFw](http://exitticket.org/?pclid=CMKZt6Xsi0CFQ5qfgod_YEAFw) (Online exit tickets)
